Management configurations

Replication status

When a replication rule is applied to an object the replication status indicates the progress of the operation.

-

[View replication rules](#)

Expiration rule

You can use a lifecycle configuration to define expiration rules to schedule the removal of this object after a pre-defined time period.

-

Expiration date

The object will be made noncurrent and generate a delete marker on this date.

Object Lock

Store objects using a write-once-read-many (WORM) model to help you prevent objects from being deleted or overwritten for a fixed amount of time or indefinitely. Object Lock works only in versioned buckets. [Learn more](#) ↗

Object Lock

Disabled

i This bucket doesn't have Object Lock enabled. You can enable Object Lock for a versioned bucket under the bucket's **properties** tab. [Learn more](#) ↗
